DESCRIPTION AND PURPOSE OF ITEM

This item identifies up to five different types of pavement deterioration, with the corresponding severity of each, for a highway section carrying traffic in the route direction-of-inventory. This highway section must coincide with the highway section used for the Condition Rating Survey With (Item 42).

This information is used to estimate present and future highway repair needs.

This item can be determined by analyzing the video tapes generated by IDOT's video inspection vehicle. Specific instructions for determining this item are contained in the Office of Planning and Programming "Pavement Condition Rating Survey Distress Guide." If in question, contact the Central Bureau of Statewide Program Planning.

CODE AND SCREEN ENTRY INSTRUCTIONS

A 10-digit alphanumeric field, left justified, composed of up to five 2-digit codes.

DO NOT separate the codes with a space or other delimiter.

State System   -   computer-generated by analysis on the workstation. Appropriate code revisions to reflect updates and awarded projects are entered manually.

Non-State System   -   enter the appropriate code(s).

Refer to Appendix C for a description of each 2-digit code.

Use an '*' in the first position of the field to remove all distress codes.

Example	Description
A1	'D' cracking - low severity
L2O3	Alligator cracking with pattern and light spalling and frequent transverse cracks with no associated distress
*	(Remove Distress Values)

Entering a Condition Rating Survey With (Item 42) value of 9.0 automatically resets Pavement Distress With (Item 74A) to spaces.
